# Get Ready to
# LAUNCH

System migrations aren't as simple as flipping a switch. It takes time — sometimes years — and careful planning to fully prepare, deploy, and optimize new technology.

Whether it's a targeted migration or estate-wide rollout, though, Lakeside Software's SysTrack can take a lot of the guesswork and headaches out of the process. The platform's industry-leading depth, breadth, and history of data helps IT teams quickly spot hidden issues, apply smart fixes, and find ways to save on any project.

Want to help your digital transformation really take off? Here's a checklist of what you'll need.

## ✓ Full visibility across the IT estate

Collecting more than 10,000 metrics every 15 seconds from a variety of endpoints, SysTrack gives IT teams a complete view of hardware, software, user experience, and other details for seamless, cost-effective change management. Continuous real-time and historical data, as well as sentiment from end users, also provide critical insight into system performance and drive proactive IT support.

## ✓ Ability to right-size migrations and licenses

Instead of overspending with a one-size-fits-all approach, IT teams can leverage SysTrack data to right-size migrations and software licensing based on users' actual resource consumption, work requirements, and work styles. This helps reduce upfront costs as well as IT maintenance down the road.

## ✓ Insight into digital employee experience and productivity

Executive Insights and other dynamic SysTrack dashboards feature digital health scores, trends, and other key performance indicators to give IT leaders a better view of how system changes are impacting end users and overall productivity, as well as provide benchmarks by industry.

## ✓ Smart sensors and proactive IT capabilities

With more than 1,300 smart sensors activated, SysTrack can quickly alert IT to faults or issues and keep disruptions and downtime to a minimum during rollouts. Artificial intelligence-driven analysis and out-of-the-box automations also allow service desks to predict and even prevent problems from reaching end users or becoming widespread.

## About Lakeside

Lakeside Software is how organizations with large, complex IT environments can finally get visibility across their entire digital estate and see how to do more with less. For far too long, IT teams have struggled to see what's going on in their dark estate — where costly inefficiencies, poor employee experiences, and unresolved problems hide. Only Lakeside lets you give everyone a better view, so they can see the hidden issues, see the smartest fixes, and see the biggest savings. That's why so many of the world's leading global brands rely on Lakeside. And it's how our customers see an average ROI of more than 250%. Lakeside. Give everyone a better view.™
