

SOLUTION BRIEF

Advantages of a Need-Based Approach to IT

Purchasing hardware and software that end users will want to use sounds like a no-brainer. But when your environment consists of thousands of systems, understanding what applications and devices people enjoy and find useful is a daunting task. Often, IT professionals rely on subjective reports of what is being used, which can result in:

- Imprecise provisioning
- Unnecessarily high licensing costs
- Productivity loss

How can you take self-reporting out of the equation to make objective decisions about what technology is right for your organization?

Eliminate Guesswork with Complete Data

With a better view of the entire IT estate, teams can fully understand what users truly need to be their most productive. Drawing from comprehensive endpoint and digital experience data allows IT to right-size resources based on their actual value to the organization.

With a better view of the entire IT estate, teams can fully understand what users truly need to be their most productive.

- **Hardware:** Type, manufacturer, and age
- **Software:** Count, version, and usage
- **Performance:** CPU, memory, disk, and other metrics
- **Users:** Digital experience, top impacts, IT resource usage, work style

Discover Need-Based Procurement That...

... **simplifies** IT management with visibility into under-utilized and unused software, hardware performance, and end users' resource usage and needs.

... **boosts** user productivity by right-sizing resources to fit their specific device needs, job requirements, and work style.

... **provides** the best savings through targeted hardware upgrades based on device performance and users' current needs rather than time-based refresh cycles, as well as accurate software licensing that factors in actual usage and work requirements.

About Lakeside

Lakeside Software is how organizations with large, complex IT environments can finally get visibility across their entire digital estate and see how to do more with less. For far too long, IT teams have struggled to see what's going on in their dark estate — where costly inefficiencies, poor employee experiences, and unresolved problems hide. Only Lakeside lets you give everyone a better view, so they can see the hidden issues, see the smartest fixes, and see the biggest savings. That's why so many of the world's leading global brands rely on Lakeside. And it's how our customers see an average ROI of more than 250%.

Lakeside. Give everyone a better view.™
