

SOLUTION BRIEF

Right-Sizing Hardware for the Enterprise

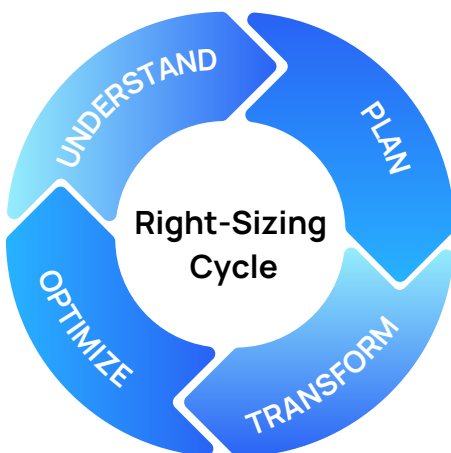

Reduce IT costs and improve DEX by providing employees with the exact devices they need

Creating optimized digital workplaces is a little more complicated than just acquiring all the latest hardware for new projects or cycle-based refreshes. And it's certainly more involved than just guessing what end users need and hoping there's enough hardware to go around.

Right-sizing — the process of analyzing end user and digital environment needs and determining the exact hardware, software, licenses, services, and other resources required — helps organizations make more strategic and cost-effective decisions when equipping digital environments. A few of the main reasons to right-size include:

- Hardware/software cost savings
- Improve digital employee experience (DEX)
- Reduce risk of legacy systems

For hardware in particular, a successful right-sizing strategy requires constant monitoring and adjustment, especially since equipment declines at different rates depending on a number of changing factors, including function, usage, and the software it supports. It also takes the right kind of solution to provide insights throughout the process.

Right-Sizing with SysTrack

To eliminate blind spots and successfully understand, plan, deploy, and optimize hardware refreshes and upgrades, there's Lakeside Software's SysTrack.

Using this powerful platform, IT is able to capture the best depth, breadth, and history of data directly from devices to gain a better view of digital experience impacts, as well as find more opportunities for cost savings. And by applying intelligent analysis to a rich repository of data, IT also has a clearer view of hardware across the digital environment; user needs and work behaviors; and possible device issues that are negatively impacting digital employee experience and productivity.

Take the first step toward right-sizing your digital environment. 

About Lakeside

Lakeside Software is how organizations with large, complex IT environments can finally get visibility across their entire digital estate and see how to do more with less. For far too long, IT teams have struggled to see what's going on in their dark estate — where costly inefficiencies, poor employee experiences, and unresolved problems hide. Only Lakeside lets you give everyone a better view, so they can see the hidden issues, see the smartest fixes, and see the biggest savings. That's why so many of the world's leading global brands rely on Lakeside. And it's how our customers see an average ROI of more than 250%. Lakeside. Give everyone a better view.™
